In the exhibit "Soul of the Game," photographer John Huet profiles legendary street basketball players like Dale Henderson (right) in a collection of 130 photographs. Bringing the exhibit to life are selected sounds of hip-hop poetry and rap.

Battling Infant Mortality Rates In Harlem

By Alaka Wali
Director of the Center for Cultural Understanding and Change

Fatima is an African-American mother of three who works as a social worker in Harlem, N. Y. She is in her early 30s and lives in a middle-class apartment building with her partner, Abraham, who is also a social worker. When Fatima became pregnant the couple turned not to a hospital, but to an independent facility that was one of the first in the country to offer midwifery and natural childbirth methods. Fatima and Abraham carefully followed the facility's prenatal-care plan and were rewarded with a healthy baby girl. Soon after the birth, however, the nonprofit agency where Fatima worked lost several city contracts due to budget cutbacks. As a result, the promotion that Fatima had hoped for did not materialize, forcing her to seek more secure employment. This placed her under greater stress as she struggled to care for her children.

Rose, 14, is of mixed ethnicity. After becoming pregnant in 1993, she left home because her father did not want her to continue seeing John, the baby's father. Rose lived on the street with John for several months before moving into an apartment belonging to a friend's mother. The couple supported themselves by selling T-shirts on Harlem's main boulevard. Rose sought prenatal care at a large public hospital with a special clinic for adolescent girls. She went assiduously to her prenatal visits and took the free vitamins provided by the hospital's pharmacy. Because of chronic shortages in hospital staff and resources, Rose usually had to spend the entire day at the clinic. And because of her poverty, she often did not eat well, relying instead on cheap fast food. Rose and John were evicted from their apartment right before

the birth of the baby. Afterward, she moved in temporarily with her grandmother who eventually took custody of the child.

The experiences of Rose and Fatima (editor's note: all the people's names have been changed to protect their identities), as well as other women who live and work in Harlem's diverse settings, reflect the complicated forces that constrain and shape patterns of social behavior. I encountered these women during a three-year research project (1993-1996) designed to explore the social context of the pregnancy experience of Harlem's African-American women. The Centers for Disease Control and Prevention (CDC) largely funded the project.

Surprisingly, despite the oft-touted high quality of our health-care system, the United States has higher rates of infant mortality than many other wealthy nations. Though U.S. infant mortality rates have been gradually declining, there still remains a significant gap in rates between black women and white women. In fact, African-Americans have persistently experienced infant mortality rates that are twice as high as those of the general population.

Researchers, having conducted a variety of epidemiological and medical studies, discovered that factors like smoking, substance abuse, low income and educational levels did not seem to explain the inequality. Researchers from one study even found that this disparity persisted between black and white college-educated women. The CDC, puzzled

by the researchers' inability to identify the key factors behind the gap, decided to undertake a broader approach by supporting two anthropological studies — one in Los Angeles and one in New York. Their hope was to identify social and behavioral factors that may have been overlooked by traditional approaches. I was the senior ethnographer on the New York study, working as part of an interdisciplinary team that included anthropologists, an epidemiologist, a perinatologist and a community advisory board.

Though our research was novel in many respects, we relied heavily on standard anthropological methods that combine qualitative and quantitative data collection, the hallmark of which is a technique called participant observation. Through participant observation, anthropologists observe and interact with their subjects in the natural settings of their communities. Researchers live with their subjects, experiencing and observing their daily lives and interactions. This technique allows anthropologists to discover the fundamental patterns of social organization (the institutions, processes and relationships that people create) underlying human behavior. For example, anthropologists have used participant observation to systematically document and compare the types of kinship systems people recognize and use, as well to study the nature of political institutions and the symbolic and social aspects of religion.

This technique is used not only by social-cultural anthropologists like myself, but by anthropologists in the subdisciplines of archaeology, biological anthropology and socio-cultural linguistics. The use of participant observation is what differentiates anthropology from the social sciences that rely more on standardized surveys to collect data.

Paul Vosper /IGN8422.2C

Above: This abandoned building on a Harlem thoroughfare symbolizes one of the problems faced by Harlem residents: the neglect of infrastructure in the community. Much of Harlem's residential property is owned by the city and absentee landlords who persistently underfund repairs and maintenance.

Lower Left: Women in Harlem continue to maintain strong support networks as a means of finding solutions to their everyday concerns.

Building Bridges In Our Community

John Weinstein / GN88119.6

Right: Thousands of parents, teachers and students gathered in Stanley Field Hall on Sept. 20, 1997, for Chicago's United Neighborhood Organization's "Family Day."

As one of the city's major cultural and educational centers, The Field Museum accepts its role as a community leader. This can take the form of developing permanent exhibits like *Living Together* that serve as catalysts for exploring the conflicts that occur when very different cultures meet. It can also mean providing teachers with the resources they need to develop and update their class curriculums. Sometimes

it means working with other Chicago educational institutions like the Adler Planetarium and the Shedd Aquarium to promote the wealth of cultural and artistic treasures that exist in the city. Here in Chicago, The Field Museum and its sister institutions are blessed with a strong philanthropic culture driven by a public and private sector that understands the importance of science, culture and the arts to a healthful and vibrant community. For example, more than one quarter of our annual operating budget comes from one source: the Chicago Park District. We are also fortunate to have a loyal membership whose annual dues and gifts support and expand our growing educational, cultural and scientific programming. Together, these contributions help us maintain an effective community voice.

But in a city as large and diverse as Chicago, our voice could be much louder.

Early last year, in exploring new avenues for increasing our leadership role in the community, the Museum created the office of

external affairs — a new department headed by Fay Hartog Levin. The goal of this department is to forge new partnerships with state and city officials, as well as to build new bridges throughout the community. It is also responsible for keeping a watchful eye on pending legislation that might affect the Museum and our community. For the department and the Museum, 1997 was a tremendous success.

The department's first objective was to open a dialogue with the Chicago Transportation Authority (CTA). This effort resulted in improved public transportation to the new Museum Campus. It also led to the CTA providing free advertising on its buses, as well as the Museum adopting CTA stations on Roosevelt Road and at O'Hare International Airport. At the beginning of the summer, the external affairs office also secured a \$100,000 grant from People's Energy Corporation to operate free natural-gas trolleys between Soldier Field parking lots and the three Museum Campus partners.

Another important function of the office is to work with other Museum departments and state and federal legislators in seeking new funding opportunities for projects that directly meet the needs of the community. These include after-school programs, theater workshops and summer activities for teens.

The external affairs office and the education department recently started working with Chicago's United Neighborhood Organization (UNO) to strengthen our visibility and relationship with schools in predominantly Latino communi-

ties. This collaboration culminated in the Museum hosting UNO's "Family Day" in which more than 6,000 parents, teachers and students packed Stanley Field Hall for a day of learning, celebration and entertainment. Paul Vallas, chief executive officer of the Chicago Public Schools, attended the event, which focused on ways of increasing parental involvement in education. Collaborations include increasing the Museum's educational outreach programs and organizing cultural events like last October's *Celebración: Living Together in the Americas*.

Although the external affairs staff is heavily involved in all these activities, they do not work alone. Throughout the Museum, educators, staff members, volunteers and trustees are working together to further strengthen The Field Museum's 105-year-old reputation as a community leader as we prepare for the next century of service.

Around Campus

Adler Planetarium

Shedd Aquarium

The Mid-Winter Blues-Buster! (January 17, 11 a.m. to 3 p.m.) — It's snowy. It's cold. The days are pretty short. Right? Wrong! In the southern hemisphere it's summer! Celebrate the southern summer season with us and learn more about the southern skies and constellations in special places like Argentina, Brazil, Australia, South Africa and everywhere that is "upside-down!"

Black History Month (February 21, 11 a.m. to 3 p.m.) — The history of science would be woefully incomplete without acknowledging the valuable contributions of African-American scientists across the years. Hear storytelling sessions, see demonstrations and participate in activities that highlight prominent and not-so-well-known black scientists.

The weekend of February 21 – 22, Shedd Aquarium celebrates **Black History Month** and the accomplishments and traditions of the African-American community by examining the rich natural and cultural history of the Mississippi Delta. Activities and storytelling will introduce visitors to the diverse aquatic life of the region while highlighting the phenomenon of migration — both the dramatic seasonal movements of birds and the historic migration of the African-American community from the agricultural Delta to the industrial North and its opportunities. Programs take place from 10 a.m. to 4 p.m. each day. For more information, call 312.939.2438. A **Black History Month** educators' packet is available free of charge by calling 312.939.2438, ext. 3410 or 3372.

Sue Uncrated — A Special Exhibit

A new special exhibit, "Sue Uncrated," is the public's first opportunity to view several bones from the most complete *Tyrannosaurus rex* skeleton ever found. The Museum purchased the fossil, named Sue, on Oct. 4, 1997, at Sotheby's in New York City with the help of McDonald's Corporation and Walt Disney World Resort.

On display until Jan. 11, 1998, "Sue Uncrated" gives visitors an overview of the process of extracting and encasing fossils for storage, shipment and eventual conservation. The exhibit includes a display of several of Sue's bones in various stages of preparation.

Highlights of the exhibit include:

Sue's fibula and tibia (leg bones) shown partially exposed with sections of their plaster jackets removed. The fibula reveals a mass of new bone growth — proof that the bone was

broken and healed during Sue's lifetime. Field Museum scientists will study this and many other bones from the skeleton, some of which are marked by injuries and bite marks. These pathologies will help scientists learn more about the dinosaur's social and competitive interactions.

Sue's massive skull displayed in protective plaster beneath a photo showing it completely revealed. Skull casts of four other meat-eating dinosaurs (right) are also on exhibit to illustrate Sue's enormous size.

Sue's forearm, claw and 12-inch serrated tooth completely revealed and prepared. The forearm is especially significant because Sue is only the second *T. rex* fossil ever found with its relatively tiny arms preserved.

Allosaurus

Herrerasaurus

John Weinstein /GN8540.16C

Sue's vertebra, partial jaw bone, shoulder blade and ankle bone encased in their plaster field jackets in open wooden crates.

Kimberly Mazanek /GN8465.16C

The Field Museum, McDonald's Corporation and Walt Disney World Resort announced the following plans for Sue at a Nov. 17, 1997, press conference:

Spring 1998

The Museum will begin a two-year process of preparing Sue in public inside a state-of-the-art fossil prep lab supported by McDonald's.

Museum researchers will begin preparing selected bones from Sue in a prep lab at Disney's new Animal Kingdom theme park in Lake Buena Vista, Fla.

McDonald's will work with the Museum to create a three-part educational series for schools that focuses on the scientific information obtained from the fossil, as well as Sue's discovery and restoration.

The Year 2000

The Field Museum will mount and display the original bones of Sue.

Disney will display one life-sized cast at DinoLand U.S.A. (one of the "lands" at Disney's Animal Kingdom).

Two life-sized casts of Sue will tour the country as part of a McDonald's millennium celebration.

Sue Arrives In Chicago

By Robert Vosper

Christmas Day for The Field Museum and the City of Chicago arrived a little earlier this year in the form of an \$8.3 million package containing the 300 fossilized bones of Sue, the most complete *Tyrannosaurus rex* skeleton ever discovered. Sue — housed in 25 wooden crates weighing an estimated five tons — arrived from New York City on Oct. 20, 1997, aboard a Pickens-Kane 48-foot truck to a crowd of eager reporters and staff members.

For a week prior to the shipping, Field Museum preparators William Simpson and Steven McCarroll supervised the crating of Sue at a storage facility in Queens, N.Y. They also carefully inspected all the protective field jackets to ensure the fossil would survive its 790-mile road trip.

"The specimen itself is in really good condition," said McCarroll. "Some of the jackets were kind of thin so we added additional layers of burlap and plaster to reinforce them."

Pickens-Kane, a Chicago company that specializes in transporting museum artifacts, donated the cost of moving and packing Sue. A major concern for Chris Knight, the company's manager of fine arts services, was protecting the 1,700-pound skull, which McCarroll and Simpson had encased in a 200-pound protective plaster case. Knight's solution was to

devise a system where the skull — which is 61 inches long, 24 inches high and 38 inches wide — would rest in an Ethafoam cushion precisely engineered according to the skull's dimensions and weight. He then strapped the skull to a specially-designed wooden skid and enclosed the structure in a customized crate.

"Our ultimate concern was that this was such a unique and rare specimen," said Knight. "With the skull, as well as with the rest of the material, we wanted to make sure the specimen was immune to vibration and movement during its journey."

Any fears that Simpson and McCarroll may have had about being responsible for transporting the world's most famous dinosaur fossil were lessened when Knight explained that his company had moved thousands of artifacts, including paintings by Claude Monet and Henri Matisse, as well as John Dillinger's death mask. He then casually added that the company once moved an object worth \$74 million.

As one last safety precaution, the Museum hired a retired Chicago police officer to travel with Sue. Fortunately, he saw no action; however, McCarroll and Simpson were glad to have

him along. During a layover in Ohio, the officer stayed with Sue all night in the hotel parking lot while McCarroll and Simpson slept.

"My biggest fear during the trip was that the truck would be involved in an accident," explained Simpson, who, along with McCarroll, followed the truck in a rental car. "Steve Kasos, the Pickens-Kane driver, was very professional . . . he did a great job. The transportation of Sue went flawlessly, in fact we haven't had any problems yet, other than finding enough time to get the project up to speed."

Finding time is something the geology department is going to have to get used to. Simpson estimates that it would take a preparator five years of working full time to prepare the fossil. To guarantee that Sue is mounted and on display at the beginning of the year 2000, the department will hire at least five preparators, three to work at the Museum and two to work at Disney's new Animal Kingdom theme park in Florida.

Above: From left to right — Chris Knight, William Simpson and Geology Chair John Flynn examine Sue's ilium, part of the pectoral girdle.

Harlem . . . Continued from page 1

Paul Weiser / CNR8423_25

Above: Harlem is a diverse community that contains historic neighborhoods of beautifully-maintained private brownstones.

Participant observation is important because it allows systematic documentation not only through what people say, but also through what they do. Direct observations of behavior and patterns of interaction also serve as powerful cross-checks to the validity of information obtained from subjects reporting on their own behavior and perceptions.

In the case of the Harlem study, we conducted participant observation in seven sites, including a large hospital, a social-service agency, a fast-food restaurant and three neighborhoods. These data were supplemented with information from focus groups, in-depth interviews and a random survey of 100 women. The results revealed strong social patterns that affect women's abilities to have healthy pregnancies and that expose them to acute stress and chronic strain.

We found, for example, that the social conditions of living in a poor community create many factors that may increase the risk of infant mortality. In our study, we also discovered that the lack of adequate and affordable

housing produces an environment in which women expend tremendous time and effort finding and maintaining safe shelters for themselves and their children. Even working-class and middle-income Harlem women find it much more difficult than other Manhattan residents to access basic services like clean streets, building repairs, proper sanitation and pest control. In our sample, more than 50 percent of the pregnant women experienced serious housing difficulties during their pregnancies. Harlem residents also contend with higher levels of environmental and air pollution than the rest of Manhattan. Our findings suggest that it is not just the presence of these

unhealthy conditions that expose women to adverse health risks, but also the amount of time and effort women expend resisting becoming victims of these conditions. To counteract these factors, Harlem women pursue individual remedies (like taking landlords to housing court) and collective remedies (like forming tenant associations). While taking action can be a positive strategy, it also has health risks, particularly the stresses that arise when problems appear intractable and efforts are met with persistent obstructions. Additionally, the information we gathered on exposure to risks in the workplace suggests that for pregnant African-American women the usual problems associated with work (like physical strain, lack of control over work load and schedule) are intensified by broader health risks linked to income and employment insecurity — all of which characterize a large segment of working African-American women. According to recent census figures, 85 percent of black women work in three major sectors dominated by government and nonprofits. In

recent years, these sectors have been hit hard by downsizing and budget cuts. Four out of the five work sites where we conducted fieldwork were eliminated outright or significantly reduced. Therefore, as the case of Fatima illustrates, even middle-class African-American women find themselves vulnerable to acute stress and chronic strain from the vagaries of the job market and lack of security. Other African-American women, like Rose, are concentrated in low-wage service-sector jobs where benefits are minimal or where bureaucratic procedures make it difficult to access continuous and consistent health care.

On the other hand, our findings also revealed that there are significant assets in Harlem that people use to create protective strategies for their health and well-being. In addition to their own resilience and persistence, their reliance on religious institutions as arenas for social change is also important. Assets also include the continued strength of women-centered families and peer networks of social support through which women and their families share material and psychological resources.

Among the implications for further research and intervention are the following:

First, the findings suggest that multiple social factors can interact to create high levels of risk and that these social factors may be more significant than individual behaviors like smoking. Epidemiologists are just beginning to document the relationship between socially-induced levels of stress and physiological vulnerability to chronic disease or poor health. Our research should help them in designing more refined methods to collect relevant data.

Second, our findings suggest that interventions for better public-health access should build on or incorporate existing community assets. For example, creative ways of getting religious institutions or neighborhood associations to offer prenatal care might be a solution. Health education and interventions using existing social networks of kin and peer groups that empower women to act on their own behalf might also be effective.

Regular readers of *In the Field* might wonder why research on contemporary urban and social problems is taking place at The Field Museum. Several years ago, the Museum recognized that to remain a vital and active educational center, it needed to broaden its approach to both education and research by directly addressing two major contemporary concerns: the protection of biodiversity and the promotion of cultural understanding. The recent opening of the *Living Together* exhibit (see November/December issue of *In the Field*), for example, is an important step toward realizing this objective. Field research in urban settings also will provide critical knowledge necessary for the Museum to reach its objectives. Urban research is also an effective way for the Museum to broaden the scope of its focus while incorporating modern anthropology's theoretical concerns. And because anthropologists are frequently tackling complex issues about contemporary society, Museum researchers also must be actively involved in this effort. To that end, the Center for Cultural Understanding and Change is developing an urban research initiative in Chicago in collaboration with local universities and community organizations. Through this project, we hope to bring the message of contemporary anthropology to the Museum's diverse and growing audience.

Alaka Wali Named Nuveen Curator

The John Nuveen Company recently funded the John Nuveen Curatorship at The Field Museum, an 8-year position that the Museum awarded to anthropologist Alaka Wali. The award will support her work as director of The Field Museum's Center for Cultural Understanding and Change.

"We are proud to have as John Nuveen Curator someone with Dr. Wali's impressive academic credentials," says Timothy R. Schwertfeger, a Field Museum trustee and chairman and chief executive officer of The John Nuveen Company. "This program will allow the Museum, through her work, to broaden urban research in the Chicago area."

For three years, Wali has directed the Center for Cultural Understanding and Change. Established in 1993, the Center is dedicated to promoting better cultural understanding through open dialogue, collaborative education projects and anthropological research on human cultures past and present. Most recently, the Center has played a prominent role in creating *Living Together* — a new permanent exhibit and public-learning project that opened at The Field Museum on Nov. 8, 1997.

The John Nuveen Company has been a longtime supporter of the humanities and education. Two years ago, Wali directed the Nuveen Forum at The Field Museum, a series of conversations among diverse Chicagoans and

anthropologists called *Teaching Culture, Cultural Teachings: Conversations About Culture and Identity in America*. According to Wali, it was through the Nuveen Forum — which was sponsored by The John Nuveen Company and the National Endowment for the Humanities — that Museum staff gathered many ideas for *Living Together*.

Besides organizing public forums, educational programs and exhibits, The Center for Cultural Understanding and Change brings together scientists from various disciplines to work on collaborative projects.

Researchers are currently investigating topics like why cultural diversity exists in societies; what kinds of forces cause cultural change; how human interactions with the natural environment shape both cultural systems and the environment itself; how complex societies evolved throughout the world; and what causes human conflict throughout history.

Wali's own research focuses on how global economic restructuring has impacted the ways in which people organize themselves and establish their social identities. Her research has been primarily in the Central and South American hinterlands and in several urban areas throughout the United States. She plans to extend her urban research to the Chicago area (see story on page 1).

1/4 Sunday

Coqui and His Crowd: Meet the Animals of Puerto Rico

11 a.m. The loud sound of "co-qui, co-qui, co-qui" fills rainy days and the night air of Puerto Rico near the coast and high up in the green mountains. Made by a small frog with an incredibly powerful voice, it's just one of the animals from Puerto Rico you'll meet in this special morning program. Many of these animals — including blind snakes, tree-climbing giant millipedes, snails that have almost completely lost their shell and two species of colorful hummingbirds — live nowhere else on Earth. Don't miss out on this adventure into the wild based on biologist and photographer Alfonso Silva Lee's soon-to-be-published children's book *Coqui y Compania!* Free with regular Museum admission; preregistration is not required. For more information, call 312.322.8854.

1/4 Sunday

Cuba: The Mystery Island Revealed

2 p.m. Alfonso Silva Lee's *Natural Cuba/Cuba natural* is the first book this century to document the tropical island's extensive fauna and flora. The largest island in the Caribbean, Cuba is also the most biologically diverse. This book offers a rare glimpse at wild Cuba, unseen by U.S. naturalists and travelers for more than 35 years. Cuba and the surrounding archipelagos are home to a remarkable number of endemic species, including the bee hummingbird, which is the world's smallest bird; minute frogs and boas; magnificent painted tree snails; and rare butterflies and orchids. Author and photographer Alfonso Silva Lee — trained both in the former Soviet Union and the United States (including The Field Museum) in biology and conservation — blends an international perspective on Cuba's unique ecological niche with a lifelong dedication to Cuba's biodiversity. His presentation will include slides of many of the exquisite photographs that are in his book. Copies of *Natural Cuba/Cuba natural* will be available for purchase and signing after the lecture. Free with regular Museum admission; preregistration is not required. For more information, call 312.322.8854.

1/9 Friday

Secrets of The Field Museum: An Insider Tells All

6 – 8 p.m. So you like the exhibits and have heard the stories, but you want to know more about the tunnels, the light wells and the former location of Stanley Field's office. Join us for a rare opportunity to learn about the history and architecture of The Field Museum with our expert guide Paul Baker. Visit rarely seen historic exhibits that are tucked away in dark corners, learn the meaning behind the art and architecture of the building, discover the location of the first elevator and visit several other interesting locations rarely seen by the public. Bring your sense of adventure and fasten your seat belts . . . it might get bumpy! Adults and children, grades 3 and up. \$10 per participant (\$8 per member participant). For more information or to register, call 312.322.8854.

1/31 Saturday

Historical and Contemporary Ceramics in Japan

10 a.m. – noon. Guest presenter Anne-Bridget Gary, a professor at University of Wisconsin at Stevens Point, will focus on some of Japan's historical ceramics, with an emphasis on pieces created for a 16th-century tea ceremony. Gary will also share her experiences as a master potter's apprentice in central and northern Japan. Participants will visit the exhibit "A Basketmaker in Rural Japan" to see analogies of historical and contemporary craft in modern Japanese baskets. \$18 (\$15 members). For more information or to register, call 312.322.8854.

2/2 Monday

A Bird's Eye View: Drawing at The Field

6 – 9 p.m. This multilevel drawing class will develop your visual language and observation skills by using the world of birds for inspiration. This class will consist of professional art instruction from School of the Art Institute faculty and lecture/lab sessions led by Field Museum scientists. These scientist-led sessions will tap into the incredible resources at the Museum, including rare ornithological illustrations, exhibits and the world's fourth largest bird collection. Students will also have the opportunity to go behind the scenes for a look at the Ayer Ornithology Library in the Mary W. Runnells Rare Book Room — a room that contains the original ornithological illustrations of noted artists Louis Agassiz Fuertes and George Sutton. All sessions will take place at The Field Museum. This course is available every Monday until April 6 (10 sessions). \$280 (\$252 members). For more information or to register, call 312.322.8854.

2/3 Tuesday

A Museum Salon

6 – 8 p.m. Provocative books, interesting company, excellent conversation and good food — in other words, all the elements needed for an engaging evening. In these small-group salon evenings, we'll discuss four important novels, each of which relates to national and racial identities, ethnicity and gender. Fiction has been an essential and often cutting-edge medium in providing a voice to social understanding. Our selection of novels, which span continents and cultures, includes *East, West: Stories* by Salman Rushdie (February); *Woman Warrior: Memoir of a Girlhood Among Ghosts* by Maxine Hong Kingston (March); *Fever* by John Edgar Wideman (April) and *Woman Hol-*

ling Creek by Sandra Cisneros (May). The discussion will rely on the participation and input of the program participants. Light hors d'oeuvres and beverages will be provided. Participants will need to buy their own books and should come to each session prepared to discuss the evening's selection. This course will take place on February 3, March 3, April 7 and May 5. (4 sessions) \$65 per participant (\$57 per member participant). For more information or to register, call 312.322.8854.

2/6 Friday

Hoops in the Hall

The goal of the Field Associates, the Museum's recently chartered auxiliary board, is to create events, programs and excursions that appeal to Chicago's young-adult population. On Feb. 6, 1998, they will host a kick-off event that will transform Stanley Field Hall into a basketball arena where spectators will enjoy a lively competition, classic game food and drinks. The event coincides with the exhibit "Soul of the Game" (see exhibit page). For more information about this event or joining the Field Associates, call 312.322.8870.

2/15 Sunday

A Journey Down the Nile

6 – 9 p.m. Explore the intriguing and mysterious cultural practices of ancient Egypt and descend the spiral staircase into the tomb of Unis Ankh. Find out what was needed for success in the afterlife and hunt for bargains in an Egyptian marketplace in the **Inside Ancient Egypt** exhibit. Then plunge into the Nile at the Shedd Aquarium to discover the variety of fresh-water aquatic wildlife that inhabits the river system and to learn about the environmental conditions that shaped this fascinating region. Adults and children, grades 3 and up. \$15 per participant (\$12 per member participant). For more information or to register, call 312.322.8854.

2/17 & 2/21

Tuesday & Saturday

Herds, Flocks, Groups and Gaggles

10 – 11 a.m. Why do some people and animals always seem to travel in groups? How many geese make a gaggles? If fish travel in schools, do they have to ride the bus? Join Audrey Sauer and learn the methods animals use to find food and protect themselves from predators by sticking together. Go on a Museum safari to spot animals in groups and to learn about their behavior. Then visit the Museum's new **Living Together** exhibit to see how people form their own special groups. Adults and children, age 3 and 4. \$8 per participant (\$7 per member participant). For more information or to register, call 312.322.8854.

For a brochure with a complete listing of winter programs, call 312.322.8854.

Soul Of The Game

Photographer John Huet profiles legendary street basketball players in a collection of 130 photographs. Bringing these compelling images to life are selected sounds of hip-hop poetry and rap. "Soul of the Game" opens on Jan. 9, 1998, and continues through March 15, 1998.

Huet visited urban playgrounds, the places where many of the coolest moves in the NBA were invented. Through his photographs, Huet puts the viewer courtside to witness the physical intensity that makes these players legends. He also shows us the players, the struggles, the good breaks and the bad breaks. Some of the players captured on film include Jackie "Jumpin' Jack" Jackson, who could leap so high that he could take a 50-cent piece off the top of the backboard. He later became one of the Harlem Globetrotters. And then there is Earl "Goat" Manigault who was once said to have dunked 36 times backwards on a bet.

The exhibit also includes a special Chicago section introducing never-before-seen images of eight Chicago legends, including Paul McPherson, Lamar Mondane and Arthur Sivils — players who perform spectacular moves that will be talked about for years to come.

"Soul of the Game" also showcases the rich oral history of street basketball by presenting the hip-hop poetry of five artists. The sounds of rap and poetry will fill the gallery as poets recount the stories of urban street basketball in their own unique styles. The writers featured are Markham Who?, Gregorio Deshawn McDonald, muMs the schemer, Poetri and Gerald Quickley.

Upper Right: From New York City's Rucker Park to Chicago's Nat King Cole Park, photographer John Huet brings to life the stories of incredibly talented players. Huet has been photographing athletes for 15 years and has won numerous awards, including a Clio nomination for his work with Nike and the NBA.

Right: A beaded copper pendant with sweetgrass and deerskin ties — created by Lorraine Shananaquet, one of the artists featured in "Sisters of the Great Lakes."

Below: A selection of baskets now on display in "A Basketmaker In Rural Japan."

Sisters Of The Great Lakes

"Sisters of the Great Lakes," on display through March 29, 1998, is a collection of artwork that shows how 20 Native American women use their creativity to address the complexities of being Indian in a modern world. The artists in this exhibit represent a variety of tribal groups from Michigan, New York, Illinois, Wisconsin and Canada.

The exhibit presents a series of visual expressions, each one a reflection of the artist's identity as a woman and as an American Indian with a distinct tribal heritage. Artwork on display includes contemporary pottery, beadwork, sculpture, dolls, paintings, photography and stained glass.

This exhibit resulted from a two-year project titled "Native American Women Artists: Transcending Boundaries for Future Generations," a series of professional development workshops coordinated by the Nokomis Learning Center for female Indian artists living in the Great Lakes region. The Center's organiz-

ers designed the workshops to increase public awareness of regional Indian art and to develop participants' business and marketing skills. Through the project, the female artists could share experiences and learn from each other — a process reflected in their work. During the program's second year, the women became known as the "Sisters of the Great Lakes" or "Sisters." It is their work during this period that is the focus of the exhibit.

"Sisters of the Great Lakes" also offers a glimpse at the varied learning experiences of these women. Some of these artists received training in traditional art forms from family and friends, while others acquired their skills from instructors in high school, college or art school. Much of the artwork shows how they combined

old traditions with new techniques, materials and forms.

Michigan State University Museum and the Nokomis Learning Center, in partnership with the artists, developed the exhibit. The W.K. Kellogg Foundation, Nokomis Learning Center, Michigan Council for Arts and Cultural Affairs, MSU Native American Institute and the Elizabeth Halsted Lifelong Education Endowment provided support for the project.

A Basketmaker In Rural Japan

The exhibit "A Basketmaker in Rural Japan," which is on display until Feb. 8, 1998, presents a comprehensive collection of 106 objects, including bamboo burden baskets, fishing creels, kitchen storage baskets and farm tools. All the objects on display were crafted by Hiroshima Kazuo — the last professional basketmaker in the mountainous Hinokage region on the island of Kyushu in southern Japan.

Born in 1915, Mr. Hiroshima has been producing baskets for rural communities for 64 years. Using local bamboo and paying great attention to detail, Mr. Hiroshima constructs the baskets that are in demand by the island's residents. The baskets reflect the islanders' everyday lives and an economy rooted in fishing, farming and lumber harvesting.

Villagers on Japan's Gokase River use baskets like those depicted in the photograph on the left to catch fish. For example, fishermen fill the basket like the one in the foreground with fragrant bait to snare fish called dace (cyprinid fish). Because the trap's opening is fitted with a gate made of bamboo strips, the fish are unable to escape. Fishermen employ traps like the ones in the background to catch carp and crabs.

The Arthur M. Sackler Gallery, Smithsonian Institution, Washington, D.C., organized the exhibit from collections of the National Museum of Natural History, Smithsonian Institution. The Smithsonian Institution Special Exhibition Fund and Nippon Express Co., Ltd. provided support for this exhibit. The JCCC Foundation supported the exhibit's installation at The Field Museum.

African Heritage Festival '98

Join the Museum on Saturday and Sunday, Feb. 7-8, 1998, for a celebration of African-American Heritage during "African Heritage Festival '98!" This year's festival will focus on the theme **Living Together** and will be used as an opportunity to revisit the **Africa** exhibit and to explore the dispersion of African people throughout the world.

Every day during the event, Museum researchers will talk about their latest findings in Africa; there will also be daily demonstrations involving themes like body adornment and shelter. The "Food Brings People Together" restaurant court will provide visitors with the opportunity to enjoy the savory tastes of African and African-American food while listening and dancing to the sounds of Maggie Brown, Billy Branch, Call for Peace Drum and Dance Company, and many others.

As a special tribute to the diaspora and the celebration of the triumph of the human spirit in the face of despair, this year's festival will also highlight the Garifuna, an indigenous people of African and Carib-Indian descent who resisted slavery and struggled against the odds to maintain their traditions.

The Garifuna culture will come alive throughout the weekend with a celebration of interactive music, dance, food and film. Two workshops and a symposium on the "Garifuna Experience" will take place on February 7 (see below). The festival continues with programs and activities for school groups on Monday and Tuesday, February 9-10, from 10 a.m. to 1 p.m.

Admission to African Heritage Festival '98 is free with regular Museum admission. For more information, call 312.922.9410, ext. 497.

Anna Deavere Smith
African Heritage Festival keynote speaker

African Heritage Programs

February 1 — Sunday, 4 p.m.

Keynote presentation Snapshots: Glimpses of America in Change: Join nationally-acclaimed playwright and performer Anna Deavere Smith for a lecture/presentation addressing issues of race, class and gender. Copies of her books *Fires in The Mirror* and *Twilight in Los Angeles* will be available for purchase and signing. (\$18; \$15 members, \$13 students, seniors and educators).

February 7 — Saturday, 4-7 p.m.

Preserving our Cultural Heritage: Join Garifuna community members from Belize, New York and Chicago for a symposium discussing the history of their exile, their extended journey and their spirituality. The symposium will be followed by a special video screening of *The Garifuna Journey*, a full-length documentary by Chicago filmmakers Andrea Leland and Kathy Berger. (Free with regular Museum admission).

February 7 — Saturday

9:30 a.m. - noon.

A Lasting Legacy: Creating Community Archives: This workshop will show participants how to prepare for the organization and maintenance of records and historically important documents. (\$28; \$25 members).

February 7 — Saturday, 1-3 p.m.

A Living Legacy: Documenting One's Culture: Using the Garifuna culture as a "case study," participants will explore the tools and techniques used to record personal, family or community history. (\$23; \$20 members).

February 7 — Saturday, 10 a.m.

Roots in the Rhythm: African-Brazilian Drumming: Learn about the African influence on the rhythms and instruments of Brazil and try your hand at using drums and other percussion instruments from Africa and Brazil with drummer Lenny Marsh. (Adults and children, grades 3-6; \$10 per participant, \$8 per member).

February 20 — Friday, 6-8 p.m.

Constructing an Exhibit at The Field Museum: Learn how the **Africa** exhibit was conceived, planned and constructed with a member of the original **Africa** development team. The evening will include a special slide presentation and tour of the **Africa** exhibit. (Adults and children, grades 3 and up; \$10 per participant, \$8 per member).

February 27, Friday, 5:45 p.m.

Journey To Africa: Family Overnight
Join us in the Museum after-hours for a special opportunity to enjoy the sights and sounds of Africa during February's *Overnight*. (Adults and children, grades 1-6; \$45 per participant, \$40 per member).

Chicago Wilderness Launches New Magazine

Did you know that . . .

more endangered species survive in three counties of northeastern Illinois than in all the rest of the state combined?

Cook County has the largest forest preserve district in the state with nearly 68,000 acres of protected land?

44 species of wild orchids are native to the Chicago region's prairies, wetlands and forests?

"I've lived here all my life and I never knew that," said a Chicago resident after reading the first issue of *Chicago Wilderness* magazine, a new quarterly publication devoted to the rare and wonderful natural areas of the region, as well as to the work of Chicago Wilderness member organizations, including The Field Museum.

Chicago Wilderness magazine, launched last November, aims to bring a seasonal dose of inspiration and information about the people making history in the field of biodiversity conservation in this area, as well as the intriguing and beautiful natural communities also known as Chicago Wilderness.

"Our goal is to celebrate the natural communities of this region, to guide readers to the genuine discovery zones within easy reach and to share what the members of *Chicago Wilderness* are learning and finding in their numerous projects," explains Debra Shore, editor of the magazine.

The premiere issue included features on

the rebirth of the oak woods and the basis for the high concentration of globally-significant biodiversity in the greater metropolitan area. A section called "Meet Your Neighbors" introduces interesting people of the region — such as Bill and Alice Howenstine, a McHenry County couple with a long history of outdoor education and stewardship, and John Case, a DuPage County commissioner who has championed a natural areas management plan for the county — as well as other members of the community like the prairie plant known as rattlesnake master. "Into the Wild" is a guide to the best natural areas of the region, accompanied by a natural events calendar announcing what's debuting on nature's stage each season. The first issue also had an ecosystem game and a field guide checklist for kids.

"I found it helpful," said one local reader. "It told me things I didn't know about my own backyard."

The next issue will include features on the short-eared owl, the region's glacial landscape and a profile of Peter Crane, the Museum's vice president of academic affairs and director. It will also contain more fascinating facts about the region, news of events, tips on resources, a guide to more natural areas, kid's pages, scenes of the winter landscape and a guest essay. Future issues will include articles on birds and habitat restoration, gardening with native plants, the history of the I & M Canal, Dave Willard's lakefront migration study, essays, photos and excerpts from settler's journals.

To subscribe, send \$12 to *Chicago Wilderness* magazine, P.O. Box 268, Downers Grove, IL 60515-0268. You can reach *Chicago Wilderness* magazine via e-mail at <<cwmag@suba.com>> or by phone at 847.869.5440.

Please note that programs are subject to change. On the day of your visit, pick up a **Field Notes Sheet** for an up-to-date program listing.

Every Thursday

1 p.m. **The Aztecs, The Maya and Their Predecessors** tour. Learn about the diverse and complex pre-Columbian cultures of Mexico and Central America. Offered every Thursday in January. Check listings for February.

Every Saturday

9 a.m. – 3 p.m. Visit the **Life Over Time** exhibit and learn how scientists are trying to understand the environment in central Montana by picking out microscopic animal bones from dirt in which dinos lived and died. Watch on a large-screen monitor as microscopic discoveries are made before your eyes!

Every Sat. and Sun.

1 p.m. **Preschoolers Alert! Story Time: Facts, Fables and Fiction** is an exciting new program located in the Place for Wonder — a hands-on area for children. Enjoy a relaxing time, learn new songs and stories, and have fun creating artwork. (One adult for every three children, please.) For a weekly list of topics, please check the *Field Notes Sheet* located at the information booth in Stanley Field Hall.

Highlights of The Field Museum tours are offered Monday through Friday, at 11 a.m. and 2 p.m. Visit some of the exhibits that make this Museum one of the world's finest. Find out the stories behind the exhibits. Check weekend listings for Saturday and Sunday highlight tours.

Jan. 9 – Friday

10 a.m. – 1 p.m. **Owl Pellets** activity. Learn about the dissection process that scientists use to discover the contents of a predatory bird's diet.

Jan. 10 – Saturday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

1:30 p.m. **The Early Maya Civilization** tour. Explore the Maya's ancestors' art, architecture, technical innovations, math and writing systems. Also find out more about the 2 million people in Mexico and Central America who still speak the Mayan language.

Noon & 2 p.m. **Kamishabai: a Japanese Storytelling Tradition**. Join Marsha Hagio Hawley and learn about an art form that evolved from itinerant street storytelling that was popular throughout Japan into the 1950s.

1:30 p.m. **Tibet Today and a Faith in Exile** slide lecture. See Lhasa and other places now open to tourists in Tibet. Learn about Tibetan refugees in India, Nepal and elsewhere. Witness the dedication ceremony of a Himalayan Buddhist Chorten in Indiana by His Holiness the Dalai Lama.

Jan. 11 – Sunday

Noon & 2 p.m. **Kamishabai: a Japanese Storytelling Tradition** (see January 10).

Jan. 16 – Friday

10 a.m. – 1 p.m. **Lava** activity. Now that they're cool, touch some of the substances produced by a volcano.

Jan. 18 – Sunday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

Jan. 23 – Friday

10 a.m. – 1 p.m. **Rocks and Minerals** activity. Try and match minerals with the familiar products they produce.

Jan. 24 – Saturday

Noon – 3 p.m. **Native American Dolls**. Artist Sharon Skolnick talks about the dolls she created that are dressed in traditional attire made of fur, horsehair, deerskin, porcupine quills, feathers, leather and cloth trimmed with beaded and appliqué designs. You can see more of Sharon Skolnick's art and the work of other Native American women in the exhibit "Sisters of the Great Lakes" (see "exhibit" page).

1:30 p.m. **The Early Maya Civilization** tour.

Jan. 25 – Sunday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

Noon – 3 p.m. **Native American Dolls** (see January 24).

Jan. 30 – Friday

10 a.m. – 1 p.m. **Shells** activity. Did you know that shells were "left-handed" or "right-handed?" Discover more about different types of shells in this informative activity.

Jan. 31 – Saturday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

1:30 p.m. **Tibet Today and Bhutan, Land of the Thunder Dragon** slide lecture. A slide presentation that takes you to Lhasa and other places now open to tourists in Tibet. Also travel to the small Himalayan country of Bhutan.

11:30 & 2 p.m. **Karagiozi Greek Shadow Puppets**. Bring the family and enjoy this 200-year-old Greek folk art. Learn Greek culture and history through satire, humor and music.

Feb. 1 – Sunday

1:30 p.m. **The Early Maya Civilization** tour.

Feb. 7 – Saturday

African Heritage Festival
11 a.m. – 4 p.m. This year's festival focuses on the theme **Living Together** and the African Diaspora. Field Museum scientists display and talk about their latest findings in Africa. Enjoy the music, dance and cuisine of African and African-Americans (see previous page for more information).

Feb. 8 – Sunday

African Heritage Festival (see February 7).

Feb. 9 – Monday

African Heritage Festival continues with activities and programs for school groups (see February 7).

Feb. 10 – Tuesday

African Heritage Festival continues with activities and programs for school groups (see February 7).

Feb. 14 – Saturday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

11:30 a.m. & 2:30 p.m. **The Aztec Empire and Its Predecessors** tour (English).

1:30 p.m. **El Imperio Azteca y sus predecesores** tour (en español).

Feb. 15 – Sunday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

Feb. 21 – Saturday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

Feb. 28 – Saturday

11 a.m. & 1 p.m. **Highlights of The Field Museum** tour.

1:30 p.m. **Tibet Today and a Faith in Exile** slide lecture.

RESOURCE CENTERS

Daniel F. & Ada L. Rice Wildlife Research Station
Learn more about the animal kingdom through videos, computer programs, books and activity boxes. Open daily, 10 a.m. – 4:30 p.m.

Webber Resource Center Native Cultures of the Americas
Use books, videos, tribal newspapers and activity boxes to learn more about native peoples. Open daily, 10 a.m. – 4:30 p.m.

Place for Wonder
Touchable objects let you investigate fossils, shells, rocks, plants and items of daily life in Mexico. Weekdays: 1 p.m. – 4:30 p.m. Weekends: 10 a.m. – 4:30 p.m.

Pawnee Earth Lodge
Visit a home of mid-19th century Pawnee people. Learn about these Native Americans and their traditional life on the plains. Weekdays: 1 p.m. program Weekends: 10 a.m. – 4:30 p.m.

John Weinstein/ GN8811027C

Above: Artist Sharon Skolnick displays her Native American dolls (see January 24).

Right: *The Call for Peace Drum and Dance Company* — one of the many artists performing at African Heritage Festival '98 (see February 7).

Jan. 2 – Friday

10 a.m. – 1 p.m. **Pareus** activity. Try out a Pacific Island style as you wrap a pareu-style dress.

Jan. 3 – Saturday

10 a.m. – 1 p.m. **Drawing in The Field** activity. Join artist Peggy Macnamara to learn how to draw your favorite Museum object.

11:30 a.m. & 2:30 p.m. **The Aztec Empire and Its Predecessors** tour (English). Discover the diversity of Mexican cultures and languages whose heritage extends over 3,000 years. Find out how the Aztec migrated to central Mexico, assimilated to this region's lifestyle and built a mighty empire prior the arrival of the Europeans.

1:30 p.m. **El Imperio Azteca y sus predecesores** tour (español). Descubra la diversidad de las culturas y lenguas mexicanas así como su herencia de hace 3000 años. Aprenda cómo los Aztecas (mexicas) emigraron al centro de México, se adaptaron al estilo de vida de esta región y construyeron un poderoso

Women's Board Closes Out The Year With "Amazonia" . . .

The Women's Board invited guests to experience a night in the rainforest at a creative black-tie benefit on Nov. 14, 1997. More than 500 people enjoyed the evening's festivities, which raised more than \$340,000 to support and care for the Museum's encyclopedic biological collections and to strengthen the Museum's environmental education programs. The Monsanto Company generously underwrote the benefit, which was titled "Amazonia: A Night In the Rainforest."

For the event, the Women's Board wrapped Stanley Field Hall in a rainforest of vegetation. While dining on foods under a canopy of mosquito netting, the sound of thunder gently reverberated throughout the hall. The sights and

sounds of a waterfall completed the ambiance. During the gala, guests had the opportunity to preview Sue — the world's most famous T. rex.

Donna La Pietra chaired the 1997 benefit and Mrs. Harrington Bischof, Sharon Partington Dixon, Laura De Ferrari Front and Mrs. John D. Nichols served as vice chairs.

Kim Mazanek /GN85521.09C

Right: From left to right — Peter Crane, vice president of academic affairs and director; Museum Trustee Richard Flury; Joan Webber, and Elizabeth Flury.

And The Holiday Tea Celebration

If the hundreds of excited children that filled Stanley Field Hall on Dec. 3, 1997, are any indication, then the Women's Board annual Holiday Tea celebration is becoming as much a Chicago holiday tradition as shopping the day after Thanksgiving. Performers for this year's event included the Jesse White Tumblers, the Stu Hirsh Orchestra, Mr. Imagination and Stiltwalker Andy Head. Women's Board members, staff and volunteers were on hand to entertain the children with a host of activities, including mask making, African Adinkra, Polish paper cutting and an educational treasure hunt. As usual, the man in the red suit with the long, shaggy white beard stole the show.

Kim Mazanek /GN85556.25C

MEMBERSHIP LECTURE SERIES

The Field Museum and Lincoln Park Zoo's Auxiliary Board Present:

Elephants: Their Social Behavior and The Impact of Poaching

A Reception and Lecture Featuring

Charles Foley, Director of the Tarangire Elephant Research Project

Thursday, Feb. 26, 1998, at 6 p.m.

Cafe Brauer (2021 N. Stockton Dr.)

In 1993, Princeton University's Charles Foley left for Tanzania's Tarangire National Park to investigate how poaching was affecting the park's elephant population. What he uncovered in his four-year study is a chilling and moving story of how poaching is destroying the basic fabric of elephant society.

Elephants are long-lived, intelligent and highly social animals existing in small family groups that provide safe and stable environments for maturing infants. However, in seeking out large tusks, poachers have systematically decimated adult male and large matriarchal populations — a process that is weakening the bonds between individuals and groups that develop over an elephant's life. In human society, it is comparable to someone killing everyone over the age of 35.

Though many researchers have documented the effect poaching has on elephant populations, very few, until now, have investigated how this practice is transforming the social structure of surviving elephant populations.

In "Elephants: Their Social Behavior and The Impact of Poaching," Foley will present his findings and introduce the audience to the wonders of Tarangire National Park — a spectacular, little-known wildlife park that is home to 2,300 elephants. He will also tell very personal stories about how the elephants he studied came to accept him, offering anecdotes about the different personalities of the animals he came to admire.

To RSVP, call 312.742.2182. Tickets are \$16 (includes food and beverages).

After 36 Years Of Service, Dorothy Roder Retires

John Weinstein /GN8548.48C

By Robert Vosper

Top: Dorothy Roder in her favorite location: the Founders' Room. Behind her is the doorway that belonged to the Old Empire tomb of Egyptian nobleman Y-Nofred. Edward Ayer collected the artifact in 1896.

Dorothy Roder's first job at The Field Museum is not exactly her most pleasant memory from her 36-year history at The Field Museum. For five years, starting in 1961, she sat at a table in the membership department thumbing through white index cards, checking a phone solicitor's prospect list against membership records.

"It was the worst job you could ever come up with," says Roder. "But every day I was there, I kept telling myself that it was the most worthwhile thing we had to do in membership."

This monotonous task, however, was the beginning of an almost four-decade relationship with The Field Museum that ended on Dec. 31, 1997, when Roder, 72, finally surrendered her Museum identification badge to find out what life has to offer without the burden of a full-time job.

"I feel very nostalgic about leaving The Field Museum, I really have a lot of reservations about it," she said a month before retiring. "After you work that many years in one place you are going to be left with an empty spot in your heart."

Though Roder's first Museum job lacked

glamour, it opened the door to her eventual promotion in 1966 as manager of the membership department. For the next 13 years, under Roder's direction, the Museum experienced a 260 percent increase in members. But in the chronicles of Field Museum history, Roder probably will not be remembered for this success, but rather for her 18 years of dedication to one of the Museum's most successful projects: Field Museum Tours.

The tour program was born out of Roder's attempt to tap into the 1977 phenomenon known as the King Tut exhibit. During its five-month stay at the Museum, the exhibit drew an unprecedented 1.5 million visitors. For months before and after the exhibit, Roder began offering membership tours to Egypt that sold out as quickly as she could organize them. Realizing that there was a market for quality overseas tour packages, she then began offering annual trips, many of which were based on exhibits or the work of Museum scientists.

In 1978, with her membership tours receiving rave reviews, Roder approached then Field Museum President Lee Webber with the idea of creating a separate tour department within membership that would introduce new donors to the Museum and would promote its scientific mission. Webber decided that it was best to create an entirely new division and explained that her current work was too important for her to head the new project. After two years of operating the program without Roder, Webber soon realized that the membership department would have to find itself a new leader.

"By that time, I was looking for a new challenge," says Roder. "I felt, after 13 years in membership, that I had come up with all the promotional ideas I was capable of. There was constant pressure to develop new marketing strategies."

Although Roder discovered the challenge she was seeking in the tour program, she did not escape the pressures she thought she had left behind. This time, however, the pressures were self-inflicted. Throughout her years in the tour program, Roder's recipe for success was to give every traveler her undivided personal attention — before and after each trip. When travelers returned home less than ecstatic about their adventures, Roder took it as an indication that she had failed.

For example, travelers on the 1994 *Arctic*

Watch tour were unexpectedly stranded in Resolute Bay on the remote Cornwallis Island when an ocean fog rolled in and grounded their plane for three days. When the news of the sudden change in itinerary reached Roder, she spent the next 72 hours manning the phones trying desperately to find a way to get her travelers to safety.

However, as Roder's hair turned grayer by the hour, her group of arctic explorers was not in the least upset. One woman explained that it was the first time in years that she had time to relax and to read a book. Another traveler used the opportunity to explore the island by taking long morning walks.

In organizing and operating more than 226 cultural and environmental tours to every corner of the globe — including Cambodia, Easter Island, China, West Africa, the Grand Canyon and Papua New Guinea — very few travelers under Roder's watch have returned dissatisfied.

"All the trips we have taken at The Field Museum have been wonderful, in fact we haven't found an operation as comparable," says Fern Peterson, who took Museum trips to Egypt, Greece and Russia. "What Dorothy brought was a really personal touch to each tour. On one tour, for example, she met us at the airport and gave us washcloths because she didn't think the hotels would have them."

Peterson's sentiments are echoed throughout the Museum.

"What Dorothy did was personalize the Museum . . . she did this first in membership and then in tours," remarked President Emeritus Sandy Boyd after learning of Roder's retirement. "She taught everyone at the Museum to see visitors, travelers and members as individuals who deserve our personal attention."

Since Roder's unofficial retirement announcement last year, she has been working on an aggressive plan that includes offering twice as many tours and developing occasional trips geared toward a younger crowd.

"When I started, my goal was to run a big tour department that would match the one at the American Museum in New York," explains Roder. "For many years we held back, but now it looks like the Museum has set this in motion. That was my goal all along, and now that I am leaving, it makes me happy to see it is heading in this direction."

The Volunteer Program Anniversary Exhibit

On Display Through April 13, 1998, In The Searle Lounge

Volunteers have been essential to The Field Museum for more than 60 years. Without the skills and experience that volunteers bring, the Museum could not function as an effective public institution. This exhibit outlines the history of volunteering at the Museum and highlights the contributions volunteers make to the visitor experience and to scientific research at The Field Museum. It also encourages visitors to join the Museum as volun-

teers. The "Volunteer Program Anniversary Exhibit" was organized by The Field Museum. If you are interested in volunteering at The Field Museum, please call Patti Stratton at 312.922.9410, ext. 526, or send a resume addressed to The Field Museum, Volunteer Programs, Roosevelt Road at Lake Shore Drive, Chicago, IL., 60605. You can also download an application from the Museum's Web site at <<<http://www.fnmh.org/info/volunteer.htm>>>.

From The Photo Archives . . .

In this 1950s photograph, Karl P. Schmidt, then chief zoology curator, is besieged by helmeted iguanas from Gallon Jug, Belize. Born in 1890 in Lake Forest, Ill, Schmidt joined the Museum in 1922 as assistant curator of reptiles and retired in 1955 as curator emeritus. Under Schmidt's leadership, the reptile division's collections multiplied tenfold and he is credited with transforming the Museum into the most important herpetological center in the world. Ironically, while the scientific community praised him for his innovative research, Schmidt refused to use modern conveniences like cars, televisions and fountain pens. Legend has it that he purchased a refrigerator only when he no longer could find a place that sold ice blocks. On Sept. 26, 1957, Schmidt died in the Museum after an African boomsland snake he was examining bit him. Schmidt chose to ignore the seriousness of the bite by refusing medical attention. When he realized he was dying, he sat at his desk and calmly took notes about the progression of the symptoms.

Museum Campus Nears Completion

By Robert Vosper

Last summer, as construction got under way on the new Museum Campus, the 10 acres to the north of the building resembled a battlefield with chunks of concrete and rusted metal strewn around the side of huge crater scarring the middle of the landscape. Dust clouds would periodically whip across the site covering the steps of The Field Museum with a thin coat of yellowish-brown dirt. During the day, the sound of jack hammers and the roar of diesel engines echoed through Stanley Field Hall.

But as summer turned to fall, the site rapidly took shape. Construction workers removed the unsightly debris; graded the sides of the crater to form a gentle slope to the shores of Lake Michigan; built winding sidewalks through the area; and set the foundations for a belvedere terrace in front of the The Field Museum.

By May 1998, the Museum Campus will be finished, creating a seamless connection between The Field Museum, the Adler Planetarium and the Shedd Aquarium. The city and

the three campus museums will celebrate the project's completion with a weekend festival starting June 12, 1998. After the opening, the three museums and the city will collaborate in

making the Museum Campus the area's premier outdoor location for cultural activities. The illustration below is an artist's rendition of the finished Museum Campus.

From the Field Archives

January 1947

In the Hall of Whales, the Museum installed four mural paintings by staff artist Arthur G. Rueckert. The paintings represented the development of "modern" whaling techniques, focusing mainly on whaling from a large factory ship and from a shore station served by smaller boats.

Paul Standley, curator of the herbarium, left from New Orleans on the steam ship *Junior* for his fifth botanical expedition to Central America. Standley's objective was to make a comprehensive collection of the flora of Honduras, El Salvador and Nicaragua.

The Museum displayed 32 photographs of the ancient Inca ruins of Peru, an exhibit sponsored by *Life* magazine. The photographs were taken by Frank Scherschel — at the time *Life's* most traveled war photographer.

Captain James Leslie Rowe donated chunks of sand fused by the heat of the first atomic bomb dropped during tests in the New Mexico desert. These solid masses resembled impure greenish-brown glass and were reported to be *slightly* radioactive.

February 1947

Members of the 1946 Peruvian Archaeological Expedition returned to the Museum after a six-month excavation of the Viru Valley on Peru's north coast. In one excavation trench, the team uncovered remnants of the Chimú people who were conquered by the Incas.

The Museum reported that attendance increased by about 200,000 from 1945 (1,070,678). Administrators argued that attendance would have been higher if Chicago had not been plagued in 1946 by two coal-strike blackouts and a prolonged bus strike.

The Field Museum created an introductory display on "The classification of Minerals." The exhibit was a response to complaints that museums rarely furnish visitors with the basic information needed to understand exhibits.

The Rockies & Yellowstone

June 6 – 11, 1998

Some of America's most dramatic scenery unfolds in the West's great mountains, rivers and parks. For six days, you can experience this splendid drama in total comfort aboard a deluxe private train, the *American Orient Express*.

The *American Orient Express* is a beautifully restored train from the streamliner era of the 1940s and 1950s. In the dining carriages, tables are set with China, silver, crystal and linen, and menus offer a delicious sampling of regional cuisine. By all accounts, it is the ideal way to savor the natural wonders of the Rockies, Yellowstone and Grand Teton National Park.

Starting in Denver, the train will progress over the Continental Divide and through the heart of the Colorado Rockies. After a stop in Salt Lake City, the *American Orient Express* will roll north to the celebrated geysers and wildlife of Yellowstone, the United States' first national park, and the rugged splendor of the Tetons. From there it will travel west, across Idaho, into Oregon. The tour includes a thrilling daytime crossing of the Colorado River by rail.

Throughout the trip, you will encounter scores of wildlife like deer, moose, elk, bighorn sheep, bear and America's last remaining bison. You will also have the opportunity to investi-

gate the thermal basins of spouting geysers and the bubbling mud pots created by the cataclysmic explosion of Yellowstone volcano 600,000 years ago. Toward the south, you will discover the sharp, snow-capped summits of the Teton Range towering above the sagebrush flats and glacial lakes of Jackson Hole valley. During the entire adventure, you will be accompanied by expert lecturers and local guides.

The cost of the tour ranges from \$2,590 to \$5,090, depending on choice of accommodation.

The Galápagos Islands On Board The *m.v. Santa Cruz*

March 15 – 27, 1998

Charles Darwin's journey aboard the H.M.S. *Beagle* lasted five years and covered more than 40,000 miles. He spent most of his time surveying the South American coast and nearby islands. During the journey, Darwin took extensive notes on the region's life forms, and at the end of his travels began questioning previous assumptions about the origin of species.

With its diverse and unique creatures, the Galápagos Islands — 600 miles west of the South American mainland — was especially important to Darwin. The beauty and spectacle of these islands have fascinated scientists and amateurs ever since Darwin published his notes more than 100 years ago. Today, it is still a showcase for environmental and evolutionary studies.

On this Field Museum Tour, you will immediately understand why Darwin was so captivated

with the Galápagos archipelago as you travel from island to island aboard the *m.v. Santa Cruz*, a 90-passenger first-class vessel.

By hiking, climbing and traveling in *pangas* (small flat-bottomed, outboard motorboats), you will explore a diversity of environments, from the strange green beaches of Floreana Island to the volcanic rubble of Bartolome Island. Each day, you will meet the islands' residents that include giant tortoises, vermilion flycatchers, finches, yellow warblers, sea lions and dolphins.

Throughout the tour, you will be joined by David Willard, The Field Museum's collection manager of birds and veteran of the tour program. Please call the tour office for pricing. An optional extension to Peru is also available.

Coming In 1998

Amazon – August • Turkey – September • Kenya – September • Tunisia – October • Yemen/Oman – October
